Education

University of California, Berkeley — Bachelor's degree in Cognitive Science Class of 2025

Relevant Coursework: Computational Methods of Cognition, AI & Business, Blockchain, Data Structures, Statistics

Technical Skills: C++, Python, SQL, Java, HTML, R, Pytorch, Tensorflow, Pandas, Git, Excel, Linux, GTM & Operations

Experience

Founder & CEO—Functional Beverage Startup (Pre-Launch) February 2026 - Present

- Founded and developing a first-of-its-kind functional sparkling beverage brand, overseeing product concept, brand identity, packaging design, and e-commerce site build from the ground up.
- Established legal and operational foundation by registering LLC, obtaining EIN, filing USPTO trademark, and conducting vendor research with co-packers and formulators to evaluate pricing, MOQs, and production feasibility.
- Authored investor-ready pitch deck and DTC go-to-market strategy with planned crowdfunding launch; actively applying to accelerator programs and small business grants.

Program Manager — American Indian Foundation January 2026 - Present

- Coordinated teams across multiple programs, establishing tracking systems and regular check-ins to ensure project milestones were met on time.
- Maintained program documentation and status updates, keeping stakeholders informed on progress and any blockers.

AI Model Trainer — Mercor AI August 2025 - December 2025

- Trained multimodal AI models on visual-auditory perception by generating 100+ labeled audio-visual pairs, enabling models to learn cross-modal representations between vision and language.
- Worked closely with teams to improve data quality protocols, developing keen understanding of how AI systems learn and interpret human communication.

Program Manager & Instructor— Magikid Robotics Lab January 2025 - May 2025

- Managed robotics program for 200+ students while instructing 3 courses weekly; established operating rhythm and communications that improved completion rates.
- Led cross-functional launch of Arduino course with custom curriculum and lesson plans, exceeding enrollment targets by 120%. Developed standardized templates that reduced instructor prep time by 3 hours/week

Research Assistant —Computational Cognitive Science Laboratory, UC Berkeley August 2022 – January 2024

- Developed Python scripts to implement modifications to ChatGPT API, enhancing functionality within open-source.
- Conducted data analysis to identify interface issues and ensure application met industry quality benchmarks.
- Contributed to cognitive science research exploring human-AI interaction patterns and decision-making processes.

Accounting Assistant —Payless Accounting, Fremont, CA March 2020 – June 2022

- Automated financial reports using macros and PivotTables, improving reporting efficiency by 30%.
- Ensured compliance in reconciliations and produced analytical dashboards for management decision-making.
- Managed QuickBooks systems for 20+ client accounts, building automated workflows and financial dashboards that improved reporting efficiency.

Projects

Bitcoin Polymarket Signal Dashboard — Web App March 2026
React, Node.js, WebSocket, Anthropic API, Claude

- Real-time dashboard built that predicts Bitcoin price direction for Polymarket's 15-minute prediction markets using live WebSocket price feeds and TradingView charts

Maps Multi-Tab Navigator — Chrome Extension — GitHub November 2025
JavaScript, Chrome Extensions API, CSS3

- Developed a Chrome extension adding tab-based navigation to Google Maps, enabling simultaneous management of multiple routes without losing active navigation state.

Optimization for Stable Diffusion Project December 2023
Python, Stable Diffusion API, TogetherAI — Cal Hacks 10.0 (72-hour hackathon)

- Built AIGC prompt optimization tool at Cal Hacks 10.0 (2,000+ participants) integrating Stable Diffusion API to help non-technical users generate effective text-to-image content.
